WEATHER SYNOPSIS BY REGION

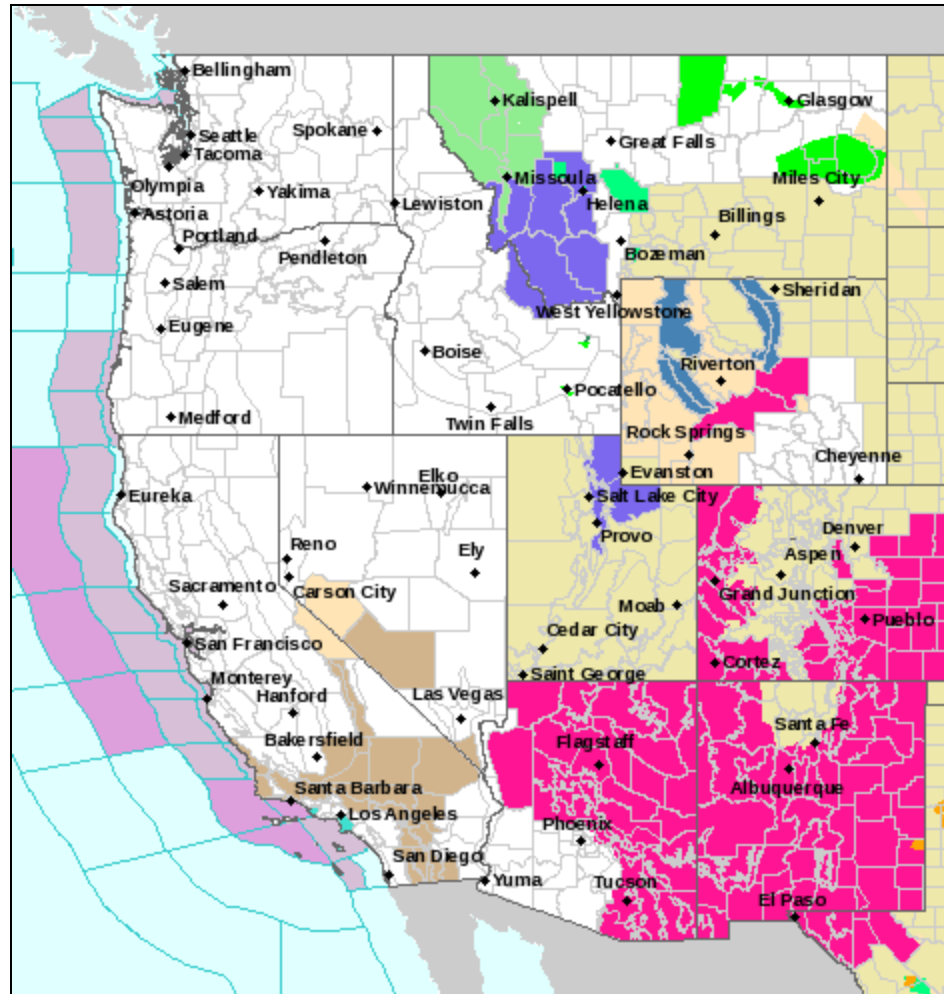

NORTHERN CALIFORNIA

A low pressure system moving across the Pacific Northwest is expected to bring cooler conditions to Northern California with isolated showers and thunderstorms, mainly over the mountains and northern valley. Cooler temperatures and increased cloud cover is also a byproduct of the system. The low will continue to move inland through the rest of the weekend with additional chances for showers and isolated thunderstorms across the mountains and northern valley. Activity will be sporadic with light accumulations. Snow levels will generally be above 5,500-6,000 feet with a few inches possible in any showers that do pop up. By next week, it is expected to be drier and warmer except for scattered mountain showers and thunderstorms through the middle of next week. Expect highs to be 5-10 degrees below normal through next Tuesday with highs in the 50s in the mountains, 60s along the coast to the mid-70s in the southern San Joaquin Valley and the low desert.

SOUTHERN CALIFORNIA

Broad low pressure (trough) over the West Coast will continue a cooler than normal weather pattern into latter half of next week. Periods of gusty northerly winds will prevail for mainly areas north of Point Conception and across the interior through Sunday night. Gusty northwest winds will prevail for the Central Coast, Santa Barbara County south coast, and the mountains and deserts through this evening. The trough should dip south late Monday night through Tuesday night and possibly bring a showery weather pattern to Southern California. A drier and warmer weather pattern can be expected for late next week. Otherwise, generally fair weather with slightly below normal temperatures can be expected through Monday. Low pressure will bring a chance of showers, mountain snow showers, and a slight chance of thunderstorms Tuesday into Tuesday night. Dry and increasingly warm conditions can then be expected later Wednesday through Saturday.
